Cave Johnson

Senior Project Proposal Manager

Health Care Company

Mr. Johnson,

I am excited to present this proposal for developing a **Heart Attack Risk Prediction Model**, which aims to enhance our ability to care for patients by providing faster and more accurate heart attack risk assessments. The project is based around using past patient's vitals and their heart attack outcomes to help us predict future patients' outcomes.

This new innovative approach to patient care will set us apart from our competitors and improve the confidence of our staff, while speeding up our ability to provide feedback to our patients. I look forward to discussing this project further as we move forward.

Please reach out with any immediate questions. You can reach me on my cell at (888) 555-5555.

Thank you for your time.

Sincerely,

Ashton Wilson
